

RETRO COMPUTER SHACK

FOR THE SERIOUS ENTHUSIAST

High Quality RGB Powered Scart Lead For The Oric 1 & Atmos Computers

The Oric RGB Powered Scart lead, is a high quality video lead, that allows you to connect your Oric 1 or Atmos Computer, to a TV, via the RGB Scart socket, to display a superb full colour RGB picture. This type of lead, gives the best quality picture possible with this computer. No tuning of the TV is required, **just manually select the Scart input on the TV**, that you have connected the Scart lead into.

This is a (powered) Scart lead, and takes the necessary power, to switch the TV into RGB mode, from the Computers Power Supply, so making it much more compatible with, CRT, LCD, LED & Plasma TV's.

This lead is designed and professionally hand made by Ian Priddey, using high quality materials and workmanship. Made from high quality overall foil screened cable, and fitted with good quality connectors. The lead is 2m long, with auto RGB switching on most TV's. Additional components (Resistors) are fitted inside the Scart plug, to ensure the correct signal levels, and provide the best quality picture and compatibility with CRT, LCD & LED TV's.

ORIC 1 CONNECTIONS

Monitor Socket

Oric Power In

To Oric Original Power Supply (Not Supplied)
